Package 'ggmice'

July 22, 2025

Title Visualizations for 'mice' with 'ggplot2'

Version 0.1.0

Description Enhance a 'mice' imputation workflow with visualizations for
incomplete and/or imputed data. The plotting functions produce
'ggplot' objects which may be easily manipulated or extended. Use
'ggmice' to inspect missing data, develop imputation models, evaluate
algorithmic convergence, or compare observed versus imputed data.

---

bwplot *Box-and-whisker plot of observed and imputed data*

Description

Box-and-whisker plot of observed and imputed data

Usage

```
bwplot(...)
```

Arguments

... Any arguments passed to the function.

Value

The output of [mice::bwplot](#) and a message about the ggmice equivalent.

Examples

```
imp <- mice::mice(mice::nhanes, maxit = 1, printFlag = FALSE)
bwplot(imp)
```

---

densityplot   *Densityplot of observed and imputed data*

Description

Densityplot of observed and imputed data

Usage

```
densityplot(...)
```

Arguments

...	Any arguments passed to the function.

Value

The output of [mice::densityplot](#) and a message about the ggmice equivalent.

Examples

```
imp <- mice::mice(mice::nhanes, maxit = 1, printFlag = FALSE)
densityplot(imp)
```

---

ggmice   *Plot incomplete or imputed data*

Description

Plot incomplete or imputed data

Usage

```
ggmice(data = NULL, mapping = ggplot2::aes())
```

Arguments

data	An incomplete dataset (of class data.frame), or an object of class [mice::mids](#).
mapping	A list of aesthetic mappings created with [ggplot2::aes()](#).

Value

An object of class [ggplot2::ggplot](#).

See Also

See the ggmice vignette to use the ggmice() function on [incomplete data](#) or [imputed data](#).

Examples

```
dat <- mice::nhanes
ggmice(dat, ggplot2::aes(x = age, y = bmi)) + ggplot2::geom_point()
```

---

plot_corr   *Plot correlations between (incomplete) variables*

Description

Plot correlations between (incomplete) variables

Usage

```
plot_corr(
  data,
  vrb = "all",
  label = FALSE,
  square = TRUE,
  diagonal = FALSE,
  rotate = FALSE,
  caption = TRUE
)
```

Arguments

data	A dataset of class data.frame, tibble, or matrix.
vrb	String, vector, or unquoted expression with variable name(s), default is "all".
label	Logical indicating whether correlation values should be displayed.
square	Logical indicating whether the plot tiles should be squares.
diagonal	Logical indicating whether the correlation of each variable with itself should be displayed.
rotate	Logical indicating whether the variable name labels should be rotated 90 degrees.
caption	Logical indicating whether the figure caption should be displayed.

Value

An object of class ggplot2::ggplot.

Examples

```
plot_corr(mice::nhanes, label = TRUE)
```

---

plot_flux   *Plot the influx and outflux of a multivariate missing data pattern*

Description

Plot the influx and outflux of a multivariate missing data pattern

Usage

```
plot_flux(data, vrb = "all", label = TRUE, caption = TRUE)
```

Arguments

data	An incomplete dataset of class data.frame or matrix.
vrb	String, vector, or unquoted expression with variable name(s), default is "all".
label	Logical indicating whether variable names should be displayed within the plot (the default) or with colors in the legend.
caption	Logical indicating whether the figure caption should be displayed.

Value

An object of class ggplot2::ggplot.

Examples

```
plot_flux(mice::nhanes)
```

---

plot_pattern   *Plot the missing data pattern of an incomplete dataset*

Description

Plot the missing data pattern of an incomplete dataset

Usage

```
plot_pattern(
  data,
  vrb = "all",
  square = TRUE,
  rotate = FALSE,
  cluster = NULL,
  npat = NULL,
  caption = TRUE
)
```

Arguments

`data`	An incomplete dataset of class `data.frame` or `matrix`.
`vrb`	String, vector, or unquoted expression with variable name(s), default is "all".
`square`	Logical indicating whether the plot tiles should be squares, defaults to squares to mimick `mice::md.pattern()`.
`rotate`	Logical indicating whether the variable name labels should be rotated 90 degrees.
`cluster`	Optional character string specifying which variable should be used for clustering (e.g., for multilevel data).
`npat`	Optional numeric input specifying the number of missing data patterns to be visualized, defaults to all patterns.
`caption`	Logical indicating whether the figure caption should be displayed.

Value

An object of class ggplot2::ggplot.

Examples

```
plot_pattern(mice::nhanes)
```

---

plot_pred	*Plot the predictor matrix of an imputation model*

Description

Plot the predictor matrix of an imputation model

Usage

```
plot_pred(
  data,
  vrb = "all",
  method = NULL,
  label = TRUE,
  square = TRUE,
  rotate = FALSE
)
```

Arguments

data	A predictor matrix for `mice`, typically generated with [mice::make.predictorMatrix](#) or [mice::quickpred](#).
vrb	String, vector, or unquoted expression with variable name(s), default is "all".
method	Character string or vector with imputation methods.
label	Logical indicating whether predictor matrix values should be displayed.
square	Logical indicating whether the plot tiles should be squares.
rotate	Logical indicating whether the variable name labels should be rotated 90 degrees.

Value

An object of class `ggplot2::ggplot`.

Examples

```
pred <- mice::quickpred(mice::nhanes)
plot_pred(pred)
```

---

plot_trace   *Plot the trace lines of the imputation algorithm*

Description

Plot the trace lines of the imputation algorithm

Usage

```
plot_trace(data, vrb = "all")
```

Arguments

data	An object of class [mice::mids](#).
vrb	String, vector, or unquoted expression with variable name(s), default is "all".

Value

An object of class [ggplot2::ggplot](#).

Examples

```
imp <- mice::mice(mice::nhanes, print = FALSE)
plot_trace(imp)
```

---

stripplot   *Stripplot of observed and imputed data*

Description

Stripplot of observed and imputed data

Usage

```
stripplot(...)
```

Arguments

`...`   Any arguments passed to the function.

Value

The output of [mice::stripplot](#) and a message about the ggmice equivalent.

Examples

```
imp <- mice::mice(mice::nhanes, maxit = 1, printFlag = FALSE)
stripplot(imp)
```

---

theme_mice   *Theme for [mice](#) style [ggplot2::ggplot](#) objects*

Description

Theme for [mice](#) style [ggplot2::ggplot](#) objects

Usage

```
theme_mice()
```

Value

A [ggplot2](#) theme.

---

theme_minimice *Minimal theme for [mice](#) style [ggplot2::ggplot](#) objects*

Description

Minimal theme for [mice](#) style [ggplot2::ggplot](#) objects

Usage

```
theme_minimice()
```

Value

A [ggplot2](#) theme.

---

xyplot *Scatterplot of observed and imputed data*

Description

Scatterplot of observed and imputed data

Usage

```
xyplot(...)
```

Arguments

... Any arguments passed to the function.

Value

The output of [mice::xyplot](#) and a message about the ggmice equivalent.

Examples

```
imp <- mice::mice(mice::nhanes, maxit = 1, printFlag = FALSE)
xyplot(imp, bmi ~ age)
```
