Publish a ‘first-author’ paper First-author = recognition given to the person who made the primary intellectual and practical contribution to a study.	Publish a preregistration Preregistration = the practice of publicly documenting a study's hypotheses and methods before data collection.	Publish a preprint Preprint = a public version of a paper that has not (yet) been formally peer-reviewed and published in a journal.
Supervision Supervision = mentorship and guidance provided to junior researchers.	Publish an open access paper Open access = making articles freely available online, so anyone may read the full text (without financial, legal or technical barriers).	Share teaching materials as ‘OER’ OER = open educational resources; materials that can be used and reused for learning or teaching, without cost.
Secure grant funding Research grant = competitive funding awarded to researchers to support and advance their scientific work.	Write a ‘PopSci’ book PopSci = popular scientific; explaining scientific insights/knowledge to a general, non-specialist audience.	Peer-review Peer-review = critical evaluation of a scientific paper (or grant proposal) by independent experts before publishing (or funding).
Give a keynote lecture Keynote = invitation to deliver a high-profile, featured talk at a conference, signaling standing and expertise in a field.	Give a public lecture Public lecture = a talk to a lay audience/ general public, explaining scientific topics in accessible, non-technical language.	Start a scientific spin-off Spin-off = company for translating scientific findings into products, services or societal applications.
Data collection Data collection = hands-on participatory, theoretical, experimental, or technical work carried out to generate research data.	Citizen science Citizen science = the involvement of non-academic societal stakeholders and members of the public as equal partners in research.	Social media ‘SciCom’ SciCom = science communication; efforts to translate and share scientific findings with non-specialist audiences.
Community outreach Community outreach = actively engaging with people inside and outside the academic world for engagement and peer-to-peer networking.	Coordinate a course Course coordination = responsibility for planning, organizing and overseeing a course, and supervising colleagues who teach.	Teach a course Teaching a course = delivering academic education, e.g. as lecture, work group, lab, or examination/grading.
Publish a ‘FAIR’ dataset FAIR = findable, accessible, interoperable and reusable; a term used for sharing research (meta)data publicly online.	Management tasks Management = administrative and leadership duties performed by academics to help run programs, research groups, and institutions.	Give a conference presentation Conference presentation = talk or poster about (ongoing) research, presented to peers at a scientific conference.
