

1st Interdisciplinary Symposium on Meta Science for Methods Research

Thank you for your interest in the **1st Interdisciplinary Symposium on Meta Science for Methods Research** on August 31 and September 1, 2026 at the University of Zurich, Switzerland.

You can find more information about the event here: <https://crsuzh.pages.uzh.ch/msmr/>

We welcome those who simply want to attend, listen, brainstorm and connect, as well as those who want to actively contribute to the program with a talk or a poster. Please note that **contributions to the program are only possible with in-person attendance**. Listening will be possible in-person and virtually.

Registrations will be accepted on a first-come, first-served basis **until June 15th**, and be free of charge. **Abstract submission** will be open **until April 30th**.

Registration

1. **Name** (first name, last name) *

Hanne Oberman

2. **Affiliation** *

Utrecht University

3. **Email** *

h.i.oberman@uu.nl

4. How will you attend the event?

Note that presenting your work is only possible with in-person attendance. *

☒ In-person

☐ Virtually

5. Do you have food intolerances or preferences?

Food at the conference will be vegetarian.

☒ Vegan

☐ Lactose intolerant

☐ Gluten intolerant

6. Do you want to submit an abstract for a talk or a poster?

Note that abstract submission is only possible until April 30. Abstracts received afterwards will not be evaluated.

Assignments to talk/poster and length of talks will depend on the overall number of submissions. *

☒ Yes

☐ No

Abstract Submission

7. Co-authors with their affiliation (if applicable)

Example: Jane Doe (University of Zurich), Max Muster (Luxembourg University)

Enter your answer

8. **Would you prefer to present a talk or a poster?**

Note that the number of talks and posters is limited and that the scientific committee will decide on the format and duration accordingly. *

☒ Talk

☐ Poster

9. Contribution: **Title** *

Teaching Open Science and Reproducibility

10. Contribution: **Abstract** (max. 300 words, not counting references) *

If we want methodologists to produce reproducible research, they should learn how to—sooner rather than later.

In this session, I want to:

- discuss how Open Science was adopted as core principle for education at Utrecht University;
- showcase how our department of Methodology & Statistics teaches reproducibility in statistics and data science; and
- engage with the audience to exchange ideas about teaching reproducibility.

At Utrecht University, 'Open Science' was recently added to the educational model [1], making it a core characteristic of our teaching. This means that students should encounter reproducibility at every stage of their academic career. In practice, however, each course coordinator may have to 'reinvent the wheel'. That's why the Community for Open Science in Education (COSiE) is developing a quality model for reusing teaching materials about Open Science and reproducibility [2].

In our statistics and data science education for the social sciences, learning about reproducibility is already part of the course aims all throughout the curriculum. Students first encounter the practices in their very first course at our university, then again in the two subsequent Bachelor level courses, and we even offer dedicated (post-)graduate courses about markup languages and reproducible programming in statistics [3].

Ideally, I would like to have more of an 'unconference' setting to discuss reproducibility as an educational topic. For example, how can we best make use of 'Open Educational Resources'? There are so many great initiatives to make use of (such as FORRT [4], The Turing Way [5], The

Carpentries [6], etc.), but administrators often prefer to stick with textbooks and peer-reviewed journal articles. How can we ensure that our teaching materials are both up to date, as well as trustworthy? And how can materials be (re)used across disciplines? I'm hoping to share some of our insights and learn from each other!

11. Contribution: **Which of the topics below fits your contribution best?** *

- ☐ *Conceptual work:* Defining and discussing what concepts such as replicability or generalizability mean for methodological research and how or to what extent recommendations on good scientific practice from other disciplines transfer to methods research
- ☐ *Tools and practices:* Concrete tools or suggestions (for example, software, platforms, templates, checklists) for improving methods research workflow
- ☐ *Empirical meta scientific work:* Literature reviews on reporting practices, self-report surveys among methods researchers, many-analysts simulation studies, etc., shedding light into how methodological research is currently done, possibly leading to suggestions for improvement
- ☐ *Policy proposals:* Suggestions how changes, for example, in our supervision, tenure or publication system, could shift incentives away from problematic practices
- ☒ *Other*
