### Submission ID

11

### What is the (working) title of your paper? (required)

Teach what you preach: how to teach reproducible research practices

### Keywords (required)

education; reproducibility; open science

### Abstract (required)

- showcase how our department of Methodology & Statistics teaches reproducibility in statistics and data science; and
- engage with the audience to exchange ideas about teaching reproducibility.

At Utrecht University, 'Open Science' was recently added to the educational model<sup>1</sup>, making it a core characteristic of our teaching. This means that students should encounter reproducibility at every stage of their academic career. In practice, however, each course coordinator may have to 'reinvent the wheel'. That's why the Community for Open Science in Education (COSiE) is developing a quality model for reusing teaching materials about Open Science and reproducibility<sup>2</sup>. In our statistics and data science education for the social sciences, learning about reproducibility is already part of the course aims all throughout the curriculum. Students first encounter the practices in their very first course at our university, then again in the two subsequent Bachelor level courses, and we even offer dedicated (post-)graduate courses about markup languages and reproducible programming in statistics<sup>3</sup>. Ideally, I would like to have more of an 'unconference' setting to discuss reproducibility as an educational topic. For example, how can we best make use of 'Open Educational Resources'? There are so many great initiatives to make use of (such as FORRT<sup>4</sup>, The Turing Way<sup>5</sup>, The Carpentries<sup>6</sup>, etc.), but administrators often prefer to stick with textbooks and peer-reviewed journal articles. How can we ensure that our teaching materials are both up to date, as well as trustworthy? And how can materials be (re)used across disciplines? I'm hoping to share some of our insights and learn from each other!

**What is your position:** junior assistant professor (lecturer/PhD candidate)

**Are you affiliated with one of the ODISSEI member organizations? If so, which one? If not, please select "Other".:** Universiteit Utrecht - Faculteit der Sociale Wetenschappen (UU-FSW)

**If you are not affiliated with the ODISSEI member organisation, please indicate your affiliation here :**

### Type of the presentation (required)

Parallel session

☐ Poster presentation

Flash talk

☐ I want to be considered for all

### Author approval (required)

I confirm that this submission has been approved by all authors

### Author will attend (required)

I confirm that at least one author will register in full to attend and present the paper at the Conference
